The toothbrush with the smartest head

Emmi-dent is the world’s only electric toothbrush with an integrated ultrasonic piezo chip in the brush head, which produces up to 96 million ultrasonic waves (air vibrations) per minute. Emmi-dent destroys the bacteria and penetrates up to 12 mm deep into the gums, but completely safe for the gums, teeth, dentures, fillings, veneers, etc.

Emmi-dent brush generates ultrasonic waves and billions of microscopic nano-bubbles which are created from the toothpaste; nano-bubbles, which are 1000 times smaller than the bacteria support the ultrasonic cleansing by destroying the bacteria on the enamel, interdental spaces, fissures. Ultrasound implodes the nano-bubbles, which shreds the membrane of the bacteria into a thousand pieces.

Emmi-dent, brilliant white teeth and healthy gums

Reliably eliminates coffee, tea, Food or tobacco stains. The Natural color of the teeth is Restored within a short time of Regular use.

Satisfied Customers:

I am convinced now about its effectiveness especially for patients experiencing periodontal disease. After trying various other clinical techniques and oral hygiene products, this new brush has definitely made the difference to achieving periodontal health, as evidenced by the absence of gingival bleeding. I would highly recommend this product to other dentists to recommend to their patients.

Ian Lamattina, BDSc FRACDS
Dentists on Vincent

I have been using the Emmi-dent ultrasonic brush for the past two months. I have found that it is effective in reducing plaque levels and signs of gingivitis. I would be happy to recommend this brush to my patients.

Kathy O'Reilly, Dental Therapist
Darlington Dental Office

Emmi-dent Set includes:
• 1x Emmi-dent handset
• 2x Ultrasonic brush heads with built-in ultrasonic chip
• 1x Charging station
• 1x Nano-Bubble Toothpaste

NEW! Special brush heads are now available for people who wear braces

The 100% ultrasonic toothbrush

- Motionless, friction free gentle cleaning without brushing
- Effective up to 12 mm in tissue
- Helps prevent bleeding gums, tooth decay and bad breath
- Ideal for people with sensitive teeth, protects implants and cleans braces
- For sparkling white teeth and healthy gums
Achieve optimal Dental Hygiene with the Emmi-dent 100% Ultrasound Toothbrush
Cleans Gently Without Brushing

Ultrasound creates up to 96 million oscillations per minute and our special toothpaste with millions of non-abrasive nano bubbles destroy plaque and tartar.

In addition, the ultrasound penetrates up to 12 mm deep below the gum line where it kills bacteria. Emmi-dent provides optimal care and protection for teeth, gums, implants, crowns, bridges and braces.

Emmi-dent cleans where your toothbrush or Floss can’t reach: Ultrasound destroys bacteria deep below the gum line.

With ultrasound, you can clean your teeth gently without brushing

1. Hold the ultrasonic brush head briefly under running water.

2. Apply Emmi-dent ultrasonic toothpaste to the bristles — only our special toothpaste can create millions of non-abrasive nano bubbles.

3. Gently distribute the toothpaste onto the teeth.

4. Then gently hold the bristles against the teeth. Do not "brush"! The bristles span across 2-3 teeth. Hold the brush head for 5-10 seconds and then move on to the next set of teeth.

5. Finally, rinse the brush head and handle under running water for 20 seconds while the device continues to run.

Emmi-dent Ultraclean with revolutionary Ultrasonic Technology

Compare how Emmi-dent with ultrasound is better than manual, electric or so-called “sonic” brushes.
